

MICMACS+

Driving nodes - Highly influential and with little dependence on other nodes. The key enablers of progress; increasing their value should be the first priority for systems change.

4 3

Driving ___

Size x Betweenness =

Autonomous nodes - weak influence and low exposure. They enhance more than enable.

Linkage nodes - Both driving and dependent. As such, these variables are unstable and paradoxical. They sit at the heart of every balancing loop.

Dependent nodes - cannot progress until their influencing variables have.

Driven -
